FIT3143 Parallel Computing - Week 8 Lab 2

Generative AI Use Declaration

Team members: Savin Vindiv De Alwis (35221631, sdea0018@student.monash.edu); Willwara Arachchilage Shamle Imal Thilaksiri (35512075, wthi0003@student.monash.edu).

During the preparation period, generative AI assistance was used to help interpret the assessment specification and marking rubric; review and improve the Open MPI and hybrid OpenMP implementation; design correctness and performance experiments; produce chart and presentation drafts; and prepare this documentation.

The team reviewed the resulting materials against the supplied specification, compiled and executed the programs locally with Open MPI, independently validated the generated prime files, and is responsible for every submitted claim, source file, result, and explanation. The team will be prepared to explain the design, MPI collectives, OpenMP scheduling, timing methodology, and performance observations without external tools during the presentation and Q&A.;

Required accompanying evidence: export and submit the complete prompt/conversation record as separate PDF file(s), as required by the assessment specification. This declaration identifies the nature of AI assistance but does not replace those prompt records.
